inc. Remote Control

For Nikon
D SLR

Vertical Shutter Release

The "Pro/InfraPro" Ranges are fitted with innovative vertical shutter release, making shooting with the camera in a vertical position just as comfortable as shooting horizontally.

An additional set of controls replicates the camera's original controls.

Remote Control

The BatteryGrips come with Infrared Remote Control. Allowing remote shooting within a range of up to 10-12m and reducing camera shake. The Remote control transmitter provides autofocus before shutter release and continuous shutter release or bulb function for as long as the button remains pressed.

Built-in infrared receiver

The "Infra/InfraPro" Range is specially designed for digital SLRs without an integrated infrared remote receiver. This gives an added benefit of a remote control facility to SLRs without an existing built-in system.

Flexible Power Solution

Choose between 2 power sources with the Hähnel BatteryGrip:

- 1 or 2 Li-ion battery packs offer maximum performance.
- Rechargeable Ni-MH or alkaline AA batteries can be used as a backup solution when travelling or in an unexpected situation.

1 or 2 Li-Ion

12V/24V Charge Lead (HN-D300 only)

Li-ion Battery Tray

AA Adaptor

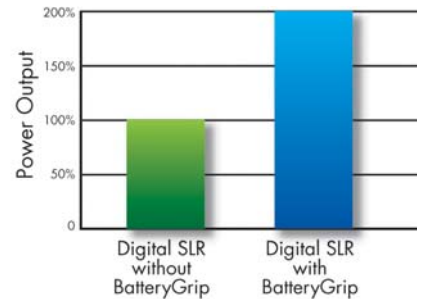

Charge Anywhere

The HN-D300 InfraPro comes with 12V/24V Charge Lead for charging the Li-Ion Battery while in the grip.

Extra Power

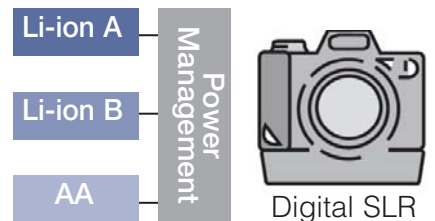

With 2 Li-ion Battery Packs the available power is approximately doubled for longer, uninterrupted camera use.

With the BatteryGrip in place you avoid running out of power at a critical moment.

Power Management

Built-in Power Management regulates the power output to the camera for maximum efficiency. 1 or 2 Li-ion Battery Packs, even at different charge levels, can be used. The Power Management detects use of Li-ion or AA batteries automatically.
